

# Job title: Senior Software Developer

Job type: project based

## Job description:

We are seeking a Professional to integrate a small team of two to five developers, working remotely and in English. You will collaborate with the software architect and the lead developer to preach clean code and respect of best practices inside the team.

## Responsibilities:

- Development of first functioning prototypes;
- Prototype testing;
- Building reusable code and libraries for future use;
- Document the code;
- Effort estimation for own tasks;
- Collaborate with software architect and lead developer;

## Key competencies:

- Good communication;
- Problem-solving;
- Logical mindset;
- Time-management;
- Be able to ask questions to clarify the requirements

## Required technical experience:

- Angular 2+ and typescript;
- Node.js;
- Strong Object-Oriented Programming experience
- Notions about MSSQL or MySQL;

## Nice to have knowledge of:

- NoSQL databases (CouchDB is ideal);
- C# and .NET;
- Docker / Kubernetes;

## Company description:

Since 2014, we have been experts in custom software solutions, mainly in France. We propose to our clients methods to build solutions and tailor made tools, to cater to the specificities of their business, and to today's e-business issues. We build, operate, monitor and support the software or application that we produced for them.
